Webinar Open Government Week 2025
Inclusive Technology: Enhance Community Access And Data Transparency In The Extractive Sector
Jakarta, May 23, 2025

</div>

Background

Indonesia's engagement in implementing the Open Government Partnership (OGP) and the Extractive Industries Transparency Initiative (EITI) has been a significant milestone in promoting transparency, accountability, and participation in the governance of natural resources. Established in 2011, OGP is an international platform where governments and civil society collaborate through co-creation to foster transparent, participatory, inclusive, and accountable governance. Indonesia is one of the eight founding countries of OGP, alongside the United States, United Kingdom, Norway, Brazil, Mexico, South Africa, and the Philippines. To date, OGP membership encompasses 77 countries and over 150 local jurisdictions. Indonesia has demonstrated its commitment through the implementation of seven National Action Plans for Open Government Indonesia (RAN OGI).

Meanwhile, Indonesia's membership in EITI was marked by the issuance of Presidential Regulation (Perpres) No. 26/2010 on Transparency of State and Regional Revenues from the Extractive Industry, later amended by Presidential Regulation No. 82/2020 on the Committee for Handling Coronavirus Disease 2019 (COVID-19) and National Economic Recovery. In its implementation, Indonesia has published at least 10 EITI Indonesia reports containing data and information covering the entire extractive industry supply chain, from production to the utilization of revenues derived from extractive activities.

Indonesia recently launched the Extractive Industry Data Portal, which provides strategic data and information on oil, gas, and minerals from upstream activities, including regulations, licensing, exploration, production, sales, state revenues, regional revenue-sharing funds, and data on the extractive industry's contributions to the economy and environment. This portal is expected to serve as a tool for the public to enhance public discourse and oversight of the extractive industry, as well as a reference for the government in formulating policies (data-driven policy), particularly in planning a just energy transition. The portal's establishment follows Indonesia's response to the EITI Board's decision last year, approving Indonesia to begin partial mainstreaming of data disclosure.

However, a 2024 PWYP Indonesia report highlights that merely presenting data through a portal is insufficient. Ensuring that communities, especially those around mining areas, can access this data and information is critical. This includes providing detailed, timely, and relevant data on the impacts of the energy transition on their lives. Other findings emphasize the importance of presenting information in formats accessible to communities and the need to involve community representatives in dialogues and decision-making processes related to the energy transition. This involves promoting sustained community engagement throughout the mining and energy project cycles and ensuring community perspectives influence local, national, and global policies.

This aligns with the Open Budget Survey 2023 by the International Budget Partnership, which shows Indonesia's budget transparency score at only 68 out of 100, reflecting limited public access. The latest EITI validation in November 2024 gave Indonesia a score of 67 points, categorized as "fairly low," in implementing extractive sector transparency standards. More concerning, the Satu Data Indonesia 2024 report reveals that only 40 percent of ministries and institutions provide open budget data. Vulnerable groups—indigenous communities, women, and people with disabilities—are rarely involved in oversight, with only 15 percent of budget management processes including them (UNDP Indonesia, 2023).

Inclusive technology serves as a bridge to address these disparities. The World Bank (2016) defines digital inclusion through four pillars: internet access, digital skills, affordability, and relevant content. For example, the Satu Data Indonesia portal could present mining revenue data in local languages or offline formats for rural residents. The Lapor! application enables farmers in Kalimantan to report misuse of reforestation funds from their mobile phones. PWYP Indonesia has demonstrated this potential in North Morowali, Sulawesi, through community engagement in local EITI implementation, ensuring that nickel mining budget data is accessed and utilized by the community.

This webinar, organized as part of Open Government Week 2025, aims to strengthen cross-stakeholder discussions on how inclusive technology can enhance community access and data transparency in the extractive sector.

Objectives

1. Promote inclusive technological approaches to strengthen community access and data transparency in the extractive sector, in line with EITI and OGP principles.
2. Encourage multi-stakeholder collaboration in dialogues and decision-making related to the energy transition in the extractive sector.
3. Strengthen the role of OGP and EITI as platforms for multi-stakeholder collaboration that promote transparency, accountability, and participation in the governance of extractive resources.

Time and Date

- Day/Date   : Friday, 23 May 2025
- Time   : 16:00–17:30 Jakarta Time
- Platform   : Zoom Meeting
  https://swn.to/r27ifa

Organizers

○ Publish What You Pay (PWYP) Indonesia
○ Extractive Industries Transparency Initiatives (EITI) Indonesia

Speakers

- Cahyono Tri Birowo, Deputy for Government Digital Transformation, Ministry of State Apparatus Empowerment (PAN) and Bureaucratic Reform (RB)
- Chrisnawan Anditya, Head of EITI Indonesia Secretariat
- Sandra Rojas, Senior Policy Officer, EITI Secretariat
- Irendra Radjawali, Scholar-Activist, Board of PWYP Indonesia

Moderator

- Mouna Wasef, Head of Research and Advocacy, PWYP Indonesia

Agenda

16.00 – 16.05	Opening
16.05 – 16.15	Remark
	Maharani Wibowo, Director of Foreign Policy and International Development Cooperation, Ministry of National Development Planning/Bappenas
	(Point of Contact OGI)
16.15– 17.25	Discussion and Q&A

Cahyono Tri Birowo, Deputy for Government Digital Transformation, Ministry of State Apparatus Empowerment (PAN) and Bureaucratic Reform (RB)
The Implementation of an Electronic-Based Government System to Build Inclusive Digital-Based Public Services

Chrisnawan Anditya, Kepala Sekretariat EITI Indonesia
Extractive Data Portal: Mainstreaming EITI Data for Boarder Access and Data Driven Policy

Sandra Rojas, Senior Policy Officer EITI Secretariat
EITI and OGP as a Platform That Bridges the Voice of the People with Government Decision-Making

Irendra Radjawali, Scholar-Activist, Board of PWYP Indonesia
Storytelling with Data: How Inclusive Technology Helps People Understand and Voice Their Aspirations

17.25 – 17.30	Closing
